May 7 2002

Occasional, irreproducible, data miss in SDAViewer and API.

- The SDAScalarServlets occasionally return to us empty or incomplete XML files, some data values are missing.
- Occurs when 2 or more users are requesting data. The frequency of such problems tends to increase if the two users ask for information from the same file index, case index.
- The problem is reproducible.
- Tim is investigating, we suspect that the cache in the Servlets is either unavailable, inappropriately invalidated, or valid...
